ROMA

August 2026

Highlights

Roma has recently received recognition from the Chinese YMCA of Hong Kong, winning the "Y-Care Outstanding Performance (Social) Award" and the "H-Care Health-Friendly Scheme 2025-2026". These awards highlight our ongoing dedication to community needs through the Y-Care framework and support for employee well-being via the H-Care initiative. We were also honored as a "Perfect Match Partner" for our contributions to The Y-Care CSR Scheme.

2026 MAY

Y-Care CSR Scheme cum H-Care Health-Friendly Scheme Award

Our efforts in the last year include mobilizing around 20 employees, clients, and partners for a Food Angel initiative, where we processed over 700 kg of vegetables to prepare meal boxes for those in need. Also, in response to the fire incident that occurred in Tai Po, 9 of our employees volunteered themselves in collaboration with the Care Teams to support emergency response activities in the Tai Po Community Centre. At work, we promote workplace wellness by organizing team-building events and sports activities, such as yoga and pickleball. We also provide staff training and sponsor employees' career development, including study leaves and expenses.

Moving forward, the Group aims to strengthen collaboration with organizations like the Chinese YMCA of Hong Kong, continuing to leverage our network to positively impact the community and promote workplace wellness.

ESG News

Seminar on ESG Assurance (Verification) and Updates

2026 JUN

We are excited to recap that on 3 June 2026, **around 60 participants from over 20 listed companies** joined the "ESG in Transformation, Sharing & Learning Seminar" organized by Roma. The session featured a 2-hour sharing session with three esteemed guest speakers:

Mr. Bill Tsang, Head of ESG from Roma, Ms. Rowena Wong, Head of Sales and Marketing from InnoBlock Technology Limited, and Mr. Mark Lee, Senior Vice President from HUTCHMED (China) Limited.

Mr. Tsang shared insights into the background and importance of ESG verification, and introduced emerging international standards including ISO 14019 and ISSA 5000, together with the latest regulatory updates and best practices being adopted by listed companies. Ms. Wong discussed the transformation of ESG data collection processes, highlighting the role of audit-ready ESG data platforms, while Mr. Lee presented the progression of HUTCHMED's sustainable journey, including how performance in particular disclosures and ESG ratings has improved over time. The seminar concluded with a forum discussion, during which the three speakers encouraged companies to begin conducting data verification to strengthen the credibility and confidence of their ESG disclosures.

With the support of TTGreen, our co-organizer, the carbon emissions generated from organising this event have been offset through high-quality carbon credits, namely the Southern Cardamon REDD+ Project in Cambodia. The offset covers emissions related to venue electricity consumption, participant commuting, and refreshments.
